

For Battery Discharge testing
and Power Supply testing

24th March 2016

Model No. BD18-48P-24/12

Product Datasheet

48V / 300 Amp; 24V / 190 Amp and 12V / 95 Amp (in one unit) Electronic Load

Features:

- Quality Product
- Rugged and Reliable Design
- Full Remote control Option (suitable for Ethernet/LAN control)
- Very Cost effective
- Microprocessor controlled
- 300 Amps at 60V (continuous rating)
- 18kW Rated
- Portable – very light weight Load
- Small case size with carrying handles on the front panel
- Continuously variable current
- Constant Current operation is standard
- Option for CP, CR, CV modes.
- Completely powered from the Batteries under test.
- Two LCD digital panel meters for Voltage and current
- Thermally safe
- Fan fail detect on all fans
- Over temperature detect
- OverVoltage protection
- Intelligent Load feature; has built-in LVD to remove load at "End Voltage"
- Selectable "End Voltage" prevents deep discharge and possible damage
- Amplified Shunt output is available
- Remote enable / disable (suitable for UPS control)
- Anderson SB Series 350 Amp connector for DC power connection

Introduction

This particular Load has been designed to operate with 12V, 24V and 48V Battery systems and is extremely cost effective.

The load is continuously rated at 300 Amps at up to 60V DC, i.e. 18kW. This model also caters for 24V systems, (up to 190 Amps), and 12V systems (up to 95 Amps). The standard model has constant current operation. There is an option available for Constant Power, Constant Resistance and Constant Voltage. The mode selection will be via the front panel. The load current is continuously variable over the entire current range. The current is controlled via two knobs on the front panel, one coarse and one fine control.

As standard there is an in-built LVD, (Low Voltage Disconnect). It is possible to select the "End Voltage" for 48V; 24V and 12V systems with an equivalent "End Voltage" per cell from 1.55V PC up to 1.90V PC. When enabled the load monitors the overall battery Voltage and when it drops to the "End Voltage" it will automatically disconnect the load and the current will drop to zero. Thus, the Load now becomes an *intelligent Load*, in that if it is left unattended it will prevent deep discharge of the batteries and hence prevent any possible damage to them.

When this load is used in conjunction with the "*Manatronics Data Logger DLM-09*", (which is recommended), the "End Voltage" will be programmed from the Logger and this will automatically disconnect the load when the Logger senses that the "End Voltage" has been reached. This feature will override the LVD in the load.

The Load is completely powered from the Batteries under test, i.e. no mains supply is required. Therefore tests are not terminated part way through by a temporary mains power outage. The unit uses forced air cooling. The Load is housed in a compact, rugged case with carrying handles and is ultra-lightweight for the power rating and is also completely portable. The Load may be left on site, unattended, for an extended period of time, if required.

The case has various rear panel connectors and the front panel has two LCD panel meters, one for the DC input Voltage and one for the load current. There are also eight LED's to indicate the status of the Load.

The load has been designed to be very reliable, easy to use and suitable for *field* use. It is thermally safe and has fan fail detectors on all fans together with air blockage detectors.

The DC input has overvoltage protection included and there is an option for a Fuse to be included.

The DC power connection is via an Anderson SB Series 350 Amp connector on the rear panel. Monitor points are included on the front panel which gives an amplified shunt reading for external DMM monitoring. This is also provided via a D type connector on the rear panel.

An amplified signal from the internal shunt is provided via a D type connector on the rear panel.

Control selection is made from the front panel between "Load ON", "Load OFF", "Data Logger Control", "External Input Control", (e.g. suitable for UPS control).

The rear panel has a connector to link to the "*Manatronics Data Logger DLM-09*" or for an external load on / off control, (e.g. suitable for UPS control).

Applications

Battery discharge testing.
Power Supply testing

Applications for Mains powered version - see EL18-48M

Telecom Rectifier testing.
All purpose Power Supply testing.
Load bank for Burn-in room facility.

48V 300A Portable Battery Discharge Model Specification

Absolute Maximum Ratings

DC Input Voltage -0.5 to +62V

DC input current 305A

Max Voltage between the chassis and the DC connector (SB350) 50V ac or 120Vdc

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the unit. This is a stress only rating and operation of the unit at or above these limits is not implied.

Electrical Specifications (assumes TA= -10°C to +40°C unless otherwise stated)

Parameter	Min	Typ	Max	Units	Comments
DC Input Voltage	0		60	V	
DC Input Current	0		300	A	
Common to all Modes (e.g. CC,CP,CR and CV).					
Min Voltage required to achieve max current		38.4		V	(see next line)
Minimum series resistance		0.128		Ohm	
Constant current Mode					
Current range	1.3		300	A	
Demand sensitivity		60		A/V	i.e. 5V demand input gives 300A.
Demand sensitivity tolerance		+/-0.1		%	
Constant power mode					
Power range	.078		18	kW	At 60V input
Demand sensitivity				W/ V	1V demand input sets W load.
Constant resistance mode					
Resistance range	0.3		1,000	Ohm	
Demand sensitivity					See constant resistance mode text.
Constant voltage mode					
Voltage range	9		60	V	
Demand sensitivity					See constant Voltage mode text.
Shunt Output					
Accuracy (worst case)			0.5	%	50mV 500A
LVD					
Accuracy		2		%	

N.B. Modes are CC CP CR or CP.

Absolute Maximum RatingsLogic input signals on rear D9 connector

Enable Input Voltage -2.0 to +14V wrt to Load DC –ve.

Mode select (LSB) Input Voltage -2.0 to +14V wrt to Load DC –ve.

Mode select (MSB) Input Voltage -2.0 to +14V wrt to Load DC –ve.

Fault output Voltage -2.0 to +16V wrt to Load DC –ve.

Demand inputs (+/-) -10 to +10V wrt to Load DC –ve.

0V reference on D9 connector 50mA

CAUTION: Stresses above those listed in “Absolute Maximum Ratings” may cause permanent damage to the unit. This is a stress only rating and operation of the unit at or above these limits is not implied.

Electrical Specifications (assumes TA= -10°C to 40°C unless otherwise stated)

Demand input	Min	Typ	Max	Units	Comments
CMRR of differential demand input stage		50		dB	For DC
Common mode range of differential demand input stage	-10		+10	V	wrt load -ve DC input
Demand current; temperature drift.		0.5		%	Over the temperature range
Demand current offset		15		mA	
Demand current linearity		0.2		%	
Demand Voltage, 3dB cutoff frequency, for CC, CP and CR Modes.		800		Hz	can be increased at factory up to 20kHz.
Demand Voltage, step response, for CC, CP and CR Modes.		1		mS	10% to 90% rise or fall
Demand Voltage, 3dB cutoff frequency, for CV Mode only.		1.59		Hz	
Logic inputs					
Range Input Voltage (High Level)	7			V	Internal pull up resistor 3k3 to +12V
Range Input Voltage (Low Level)			4	V	
Enable Input Voltage (High Level)	10			V	Internal pull up resistor 2k2 to +12V
Enable Input Voltage (Low Level)			7	V	
Mode select (LSB or MSB) Input Voltage (High Level)	7			V	Internal pull up resistor 22k to +12V
Mode select (LSB or MSB) Input Voltage (Low Level)			3.5	V	

	Min	Typ	Max	Units	Comment
Logic outputs					
Fault output high (I _{out} = 10uA)		11		V	
Fault output low (active) (sink 30mA)		1.2		V	
Static Characteristics					
Noise and ripple, psophometric		0.7		mA	RMS
Noise and ripple, psophometric		0.1		mV	RMS see note 1.
Noise and ripple, wideband		3		mA	RMS
Noise and ripple, wideband		0.2		mV	RMS see note 1.
Settling time, 0 – 100A step		300		uS	
DC Input Resistance of load		1		Meg Ohm	When off without fans running.

Note 1. Measured at the DC input terminals with a 48V battery connected in CC mode.

PHYSICAL AND OTHER SPECIFICATIONS

Dimensions	482 wide x 267 (6U) high x 415 deep	mm	
Weight	21.5	kg	
Dimensions		inches	
Weight	47.5	lb.	

Specifications herein, are subject to change without notice. This publication supersedes and replaces all information previously supplied.

Options:

- Remote control box, (in place of front panel controls, for ease of use, when the load unit is under a bench or some distance away).
- Module for Constant Power, Constant Resistance and Constant Voltage.
- Mating Anderson SB Series 350 Amp connector.
- 19" (inch) Rack Mount case

Ordering Information

Model number: BD18-48P –24/12

Protection

Fan fail detectors

Over Temperature detector

OverVoltage detector that switches the load current to zero.

DC Power input connectors

Anderson SB Series 350 Amp connector

External enable

Both active high and low inputs provided.
